

Pests and beneficial insects - blog 04 Belarus

From Lithuania to Belarus, our next station in our pest and beneficial insect blog. René Brand and Mikhail Lamanos are talking about the pest pressure in Belarus. Due to the cold conditions since the beginning of september there is no huge pest problems. At these temperatures, the pests do not feel comfortable. But in this year, many farmers used seeds with lumiposa treatment. The lumiposa treats seeds looks more vigorous and more developed with more biomass.
